27 [illegible]

MEMORANDUM FOR: Director of Central Intelligence

SUBJECT : Interview with [redacted]

After interviews with three of the four observers involved in the "Flying Saucer" event, there still appears nothing to confirm the existence of these or other particularly unconventional type aircraft. It appears more likely that the aircraft observed were normal jets or at the very best aircraft with high rate of climb. Since [redacted] seems to have been the prime mover in sending the original dispatch and ascribing so much confidence to the observation of these saucers, it is imperative that he be interviewed alone. Furthermore, he should be able to provide some expert testimony relative to the [redacted] complexes which has not been mentioned in any previous correspondence relative to this trip. It is my understanding that G-2 is holding back on interviews with [redacted] ostensibly in order to wait for a joint interview with him and [redacted] I would recommend that we try and avoid this procedure.

HERBERT SCOVILLE, JR.
Assistant Director
Scientific Intelligence

Enclosure:
[redacted] Copies 1 and 2
